

Module not found: No module named 'rich'

CPS2232 Q&A: fail to run `check.py` Ava Cong Ye; Last Update: 2025/ 3/ 3

Question

安装最新的 PowerShell, 了解新功能和改进! <https://aka.ms/PSWindows>

```
PS C:\Users\Lenovo\OneDrive\Desktop\Lab0> python check.py
Traceback (most recent call last):
  File "C:\Users\Lenovo\OneDrive\Desktop\Lab0\check.py", line 1, in <module>
    from rich import print as rprint
ModuleNotFoundError: No module named 'rich'
```

Answer

If the following won't work

```
python -m pip install rich
```

Then it should be something to do with dependency conflicts. You may have a package that was incompatible with the version of `rich` install. Try upgrading the `rich` module with following

```
pip install rich --upgrade
```
